Deep LearniHng Lab Course Ex4

Stefan Dilger

11. December 2017

1 Introduction

The accuracy dose not increases significantly after 15000 iteration. The training could be stopped earlier.

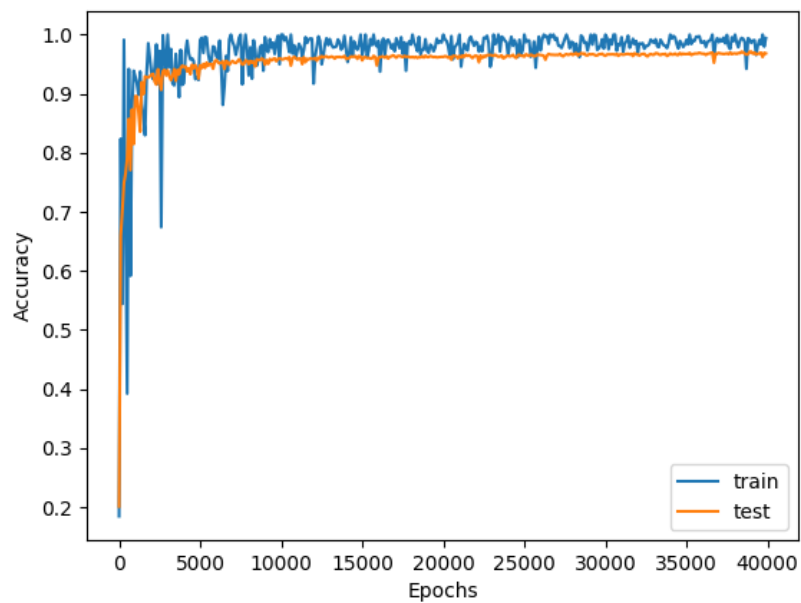

Figure 1: Accuracy over 40000 iteration

The fewer cells the worse the prediction (segmentation).
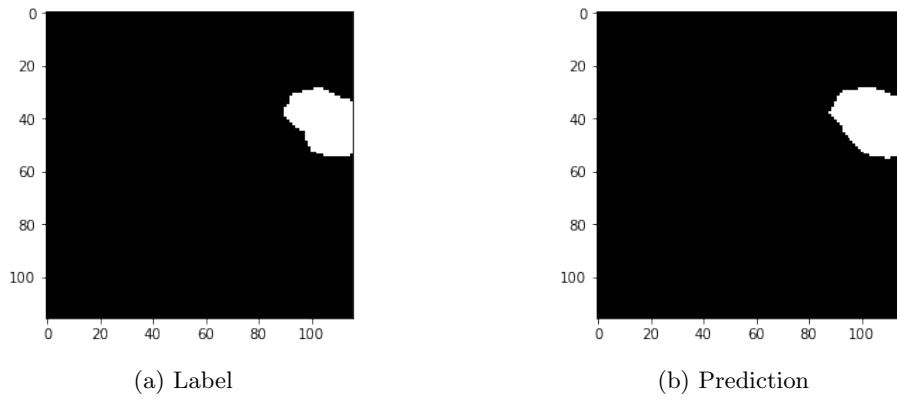

(a) Label   (b) Prediction

Figure 2: Bad prediction in overlapping part

(a) Label   (b) Prediction

Figure 3: Good single prediction

(a) Label   (b) Prediction

Figure 4: Bad multiple prediction
